FUJIFILM

ColorGATE ProductionServer Customer Training Syllabus

(Reference 03 - ColorGATE Production Server User Manual - most recent version can be found on the DVD used to install the application) All training mandatory unless otherwise noted.

Task Trained	Trainee Initials	FTSS Initials
Customer Expectation Document Review w/operator(s) (02 ColorGATE ProductionServer CED)		
Getting Started (Ref – Chapter 3 page 13)		
Setting up Printer (Ref - Chapter 4 page 20)		
Printing in network using PPD and Virtual Printer (Ref - Chapter 4 page 27)		
Loading and printing jobs (Ref - Chapter 5 page 31)		
Processing print jobs (Ref - Chapter 6 page 50)		

* PC Requirements
* Installing ColorGATE
* Program user interface
* Product Registration
* Product Activation
* Program Settings

* Adding a Printer
* Choose Printer
* Select Printer port
* Define Paths
* Setup Hotfolder
* Determine Advance settings
* Using MIM administration

*Install printer services for PPD
* Create PPD
* Update PPD
* Export PPD
* Create Virtual Printer
* Create Virtual Printer for Mac OS X
* Defining the job printer settings

* Loading jobs
* Load manually
* Load via hotfolder
* Load via Virtual Printer
* Using preview and JobInfo log
* Preview and toolbar
* Advanced preview & color info
* Display job information
* Job navigation, ripping and printing
* Using the main folder
* Configure job queue
* Display job status
* Sort jobs in the job queue
* Use Printer Status Monitor
* Rip job
* Print job

* Defining the job and printer settings
* Define print workflow
* Define printer setup
* Set up job
* Define color management
* Define process settings
* Control RIP process
* Processing and editing jobs
* Job settings dialog for single job
* Hotfolder settings for new jobs
* Define cropping
* Changing the cropping section
* Setup manual tiling
* Adjust tiling
* Use tiling assistant
* Split tiles into jobs
* Print info text
* Use visual scaling
* Use windows
* Advanced job settings and color management
* Select profiles
* Production workflow input profiles
* Proof workflow input profiles
* Using external output profiles
* Set print mode
* Set screens
* Perform color correction
* Adjust tonal value
* Set grayscale conversion *(option)*

Task Trained	Trainee Initials	FTSS Initials

Printing white and special colors (Ref - Chapter 6 page 100)		

* Using the Acuity Advance flatbed printer * Software settings *Examples for practical use * Printing on glass, one sided (flood+white-cmyk) * Printing on black, cmyk with spot color (spot white+flood-cmyk-white) * Printing on black, high intensity cmyk (flood+FL) 1 layer, (flood+FL-FL) 2 layers	* Printing on black using white only (pixel+white only) * Printing on glass, visible on reverse side through the glass – Mirror image in job tab (flood+cmyk-white) * Printing on black using cmyk (selective+white-cmyk) * Printing on glass, visible on both sides (Flood+cmyk-white-cmyk) (Selective+cmyk-white-cmyk)	* Fast printing on glass, white on areas that do not contain pixels 1-Layer Printed in Production mode (filling+cmykw) 2-Layers Printed in Quality-Layered mode (filling+cmyk-white) * Fast printing on glass, white underprint Print in Production mode (flood+white only) Then print in any mode (white set to off) *Apply special colors

Processing Print jobs cont. (Ref - Chapter 6 page 114)		

* Advanced job settings and process settings * Set print mode * Using color replacement * Replace spot colors * Replace colors * Create color replacement tables * Using Color Picker * Load existing color replacement table * Importing entries from a color replacement table * Replace spot color manually * Specify input and replacement colors	* Color table for hotfolder * Options for color replacement * Using a container * Create container manually * Create container automatically * Edit container content * Copy container * Container options * Align jobs in container * Configure guidelines	* Container settings * Release copies or tiles * Split container * Copy job * Administration of input and output profiles * Set input profiles *Administrate output profiles

Cost Calculation Module (Ref. – Chapter 6.8 page 141) *Optional Training (needs Cost Calculation Module)*		

* Cost Calculation Module *Presetting for cost calculation *Set currency and manage report database *Add and maintain media price sheets	*Set media properties and printer restriction *Add and maintain ink price sheets *Set ink properties and printer restriction *Set filter for reports of multiple jobs *Show job cost report	*Show job data in a cost report *Show usage data in a cost report *Show calculated costs in a job report

Optimizing printed output (Ref - Chapter 7 page 151)		

* Using MIM administration * Import MIM * Create new MIM * Edit MIM	* Export MIM * Linearization assistant * Specify settings linearization * Perform linearization * Optimize ink limit for linearization	* Optimize gray balance for linearization * Media device synchronization (MDS) * Specify settings * Print and measure target * Evaluate target * Create media sync profile

Task Trained	Trainee Initials	FTSS Initials

Profiling (Ref - Chapter 7.5 page 173)

* Measure device settings
* Eye-One
* Profiler Module
* Specify settings PFM
* Supported measuring devices
* Available target templates
* Use pre-calibration
* Apply color transfer
* Perform linearization
* Optimize ink limit
* Optimize gray balance
* Print and measure profile target PFM
* Create profile PFM
* Profile settings
* Profiling for printer controlled by RGB
* Specify settings
* Print and measure target in RGB mode
* Create profile in RGB mode
* Express Profiler Module
* Specify settings EPFM
* Print and measure profile target EPFM
* Create Profile EPFM

* Reference Profiler Module *(page 199)*
* Specify settings RPFM
* Print and measure profile target RPFM
*Create profile RPFM

Profiling cont. (Ref - Chapter 7 page 195) *Optional Training (needs Proof Module)*

* DeviceLink Profiler Module
* Specify settings DLPFM
* Create profile
* Print optimization target DLPFM
* Evaluate optimization target DLPFM
* Optimize profile
* Advance print mode for DeviceLink optimization

Control Wedge Evaluation (Ref - Chapter 7.6 page 202)

* Print control wedge
* Setting for control wedge evaluation
* Measure control wedge
* Print proof report
* Print proof report on labels
* Quality Assurance Module (QAM)
* Print color control wedge
* Specify settings for the quality evaluation (QAM)
* Measure color control wedge
* Print quality report on labels

Additional Information (Ref - Chapter 8 page 211)

* Menus
Printer
Job
Queue
View
Options
Window
Help and Info
* Deinstallation
* Modules and functions
* Printer overview
* File extensions
* Ink name abbreviations
* Others drivers
* Export configuration
* File archive system
* Support and contact
* Support
* Contact us
* Feedback
* Glossary
* Index

Run acceptance file (Sericol_Grey_Test.eps)

* Send the test file PDF using the Customer workflow to the wide format print engine
